This product is certified for the EU Ecolabel.

Content

The product is made from
High product quality is secured through quality and hygiene management systems throughout production, storage and transport.
We do not use softeners for professional hygiene products.

- Pulping aid (chemicals that help to repulp wet strong paper)

Bleaching is a cleaning process of the fibres and the aim is to achieve a bright pulp, but also to get a certain purity of the fibre in order to achieve the demands for hygiene products and in some cases to meet the requirements for food safety.
In order to maintain a stable process and product quality the paper manufacturing process is supported by the following chemicals/ process aids:

- defoamers (surfactants and dispersing agents)
- pH-control (sodium hydroxide and sulphuric acid)
- retention aids (chemicals that help to agglomerate small fibres to prevent fibre loss)
- Coating chemicals (that help to control the creping of the paper to make it soft and absorbent)

Chemicals

All chemicals (process aids as well as additives) are assessed from an environmental, occupational health and safety and product safety point of view.
In the cleaning of our waste water we use flocculation agents and nutritients for the biological treatment to secure that no negative impact on water quality comes from our mills.
Virgin pulp
There are different methods used today for bleaching: ECF (elementary chlorine free, where chlorine dioxide is used, and TCF (totally chlorine free) where ozone, oxygen and hydrogen peroxide is used.
This product is certified for FSC®.

Packaging

Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes

Material

Virgin fibres
To reuse broke we use:

Destruction

This product is mainly used for personal hygiene and can be collected together with household waste.
The packaging material is made from paper or plastic.

Environmental certification

Essity UK Ltd, Southfields Road, Dunstable, Bedfordshire LU6 3EJ, United Kingdom

To control product performance we use additives:

Article creation date and latest article revision

Date of issue: 19-04-2019
Revision date: 04-05-2021

Food Contact

This product fulfills the legislative requirements for Food Contact materials, confirmed by external certification performed by a third party. The product is safe for wiping food contact surfaces and may also come occasionally into contact with foodstuffs for a short period of time.

In most of our mills we do not add optical brighteners.
Virgin pulp fibres are produced out of softwood or hardwood. The wood is subject to chemical and/or mechanical processes where the cellulose fibres are separated out and lignin and other residuals are removed.
